Patient information

How to access the Patient Portal

This document will help you create a VicKey account and link to your secure Patient Portal. Austin Health is using the VicKey website to deliver the Patient Portal service.

Accessing our Patient Portal

There are three main steps:

Create my Hospital Account

- Go to the VicKey sign-in page: https://patientportal.vickey.org.au/
- Select Create Account.
- Enter your account details (these details are for setting up your account and don't need to match other records).
- Select Create Account.
- Check your email for a verification message and select the link in the email to continue

Link a patient to your VicKey account

- On the linking page, enter the patient's details and select Next.
- Make sure the details exactly match what's in our records.
- If everything matches, you'll be taken to the verification page (see step 3).
- If there's a mismatch, you'll see an error message.

Verify your identity

- On the verification page, select **Send** to receive a 4-digit code via SMS to the mobile number on file.
- Enter the code in the portal and select Submit.
- If someone else is handling the account for the patient, you might need to ask them for the code.
- You'll then see a page to select or link another patient.
- Note: It may take up to 10 minutes for a newly linked patient to appear.

Using the Patient Portal

After selecting a linked patient, you will be taken to your Patient Portal home page where you can explore:

- Inbox: View messages from Austin Health.
- Waiting Lists: Check your status on waiting lists.
- o Visits: See details for scheduled appointments and procedures.
- o Contact Us: Reach out to your care team.
- o Patient Details: View contact information on file.
